

ATTORNEY DOCKET NO. P05514 (NATI15-05514)
U.S. SERIAL NO. 10/619,169
PATENT

REMARKS

Claims 1-20 are pending in the present application.

The specification has been amended to correct typographical errors in paragraphs [0026] and [0029]. Specifically, paragraph [0026] is amended herein to insert the missing word "current." Support for this amendment is found in paragraph [0026] at page 12, lines 4-5 of the specification as filed (the description of the fast comparator configuration having "a pulsed bias current" immediately before the sentence being amended). Paragraph [0029] is amended herein to correct the duration of the bias current pulse stated at page 13, line 4 of the specification as filed for the exemplary embodiment of Figures 1 and 2B-2C, which is 390 ns, not 390 μ s. Support for the amendment is found in paragraph [0026] at page 12, lines 5-6 of the specification as filed (stating that the pulsed bias current has "a pulse width of 390 nanoseconds"), in paragraph [0027] at page 12, lines 10-12 of the specification as filed (stating a ratio of pulsed bias current to system clock period of "390 ns/10 μ s"), and in paragraph [0029] at page 13, lines 11-13 of the specification as filed (stating that "[t]he pulse generator produces a 390 ns wide pulse on every falling edge of the clk signal). No new matter is being added by these amendments.
